

# EshiaBIM

## Company Profile

[Welcome Note](#)

[About Us](#)

[Our Services](#)

[Our Case Studies](#)

"In many ways, effective communication begins with mutual respect, communication that inspires, and encourages others to do their best."

## About Company

EshiaBIM is a leading, global provider of BIM consulting and Digital automation services. We are differentiated by leading with Science to provide innovative technical solutions to our clients. We support global private and government clients focused on digital construction and documentation, detailing, Structure shop drawings, rendering and API development. With a strong and vibrant team of Architects, Engineers and Developers, EshiaBIM addresses complex problems with clear solutions.

### Our Commitment

We at EshiaBIM believe and are committed to delivering rapid and optimum solutions to our clients through our talented team and international standards.

# Our Missions

EshiaBIM's mission is to be a global leader in BIM and the digital construction industry through the right amalgamation of excellent talented professionals and technology-driven partners.

## Right Talent

Meet the deliverables and achieve the target with right talent.

## Right Tools

Extending the support on a wide range of tools and platforms

## Right Speed

Faster and efficient TAT for all the projects

## Target

Our target is to ensure a smooth and simplified business with all AEC service partners in USA and Europe region

## Support

Providing unceasing support to our overseas partners in all the project needs

# Our Vision

Our vision is to be a substantial and leading participant in the AEC industry around the globe through a large range of services and also to nurture and elevate the best talents that turn probabilities into possibilities.

# Quality Control and Assurance

Maintaining the quality of the project to the desired or required specifications is one of our core principles. To ensure that our team delivers the right quality our QAQC workflow is designed as follows:

## Level 1

Here is the Quality check is done by main executives that are Architects and Engineers who check based on a checklist prepared by Sr Architects/Engineers

## Level 2

The quality check is done with the aid of tools and project specifications & requirements shared by the Project Lead and Coordinators

## Level 3

The checking is done by Project lead ensuring the review done at Level 2 is meeting the specifications as per the checklist and scope of work.

# What Do We Do?

We support global private and government clients who are focused on digital construction and documentation, detailing, structure shop drawings, rendering, and API development.

## Talent

With a strong and vibrant team of Architects, Engineers, and Developers

## Economical

EshiaBIM addresses complex problems with clear solutions that are very economical for our service partners

# Our Services

Architecture

MEPF

Structure

Construction  
Management

# Our Services

Scan to BIM

Visualization

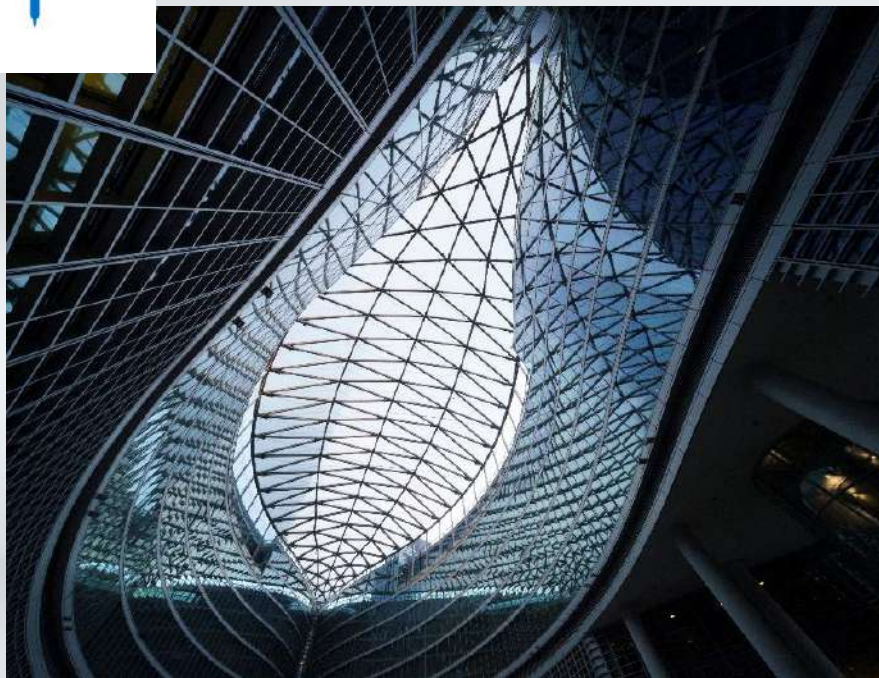

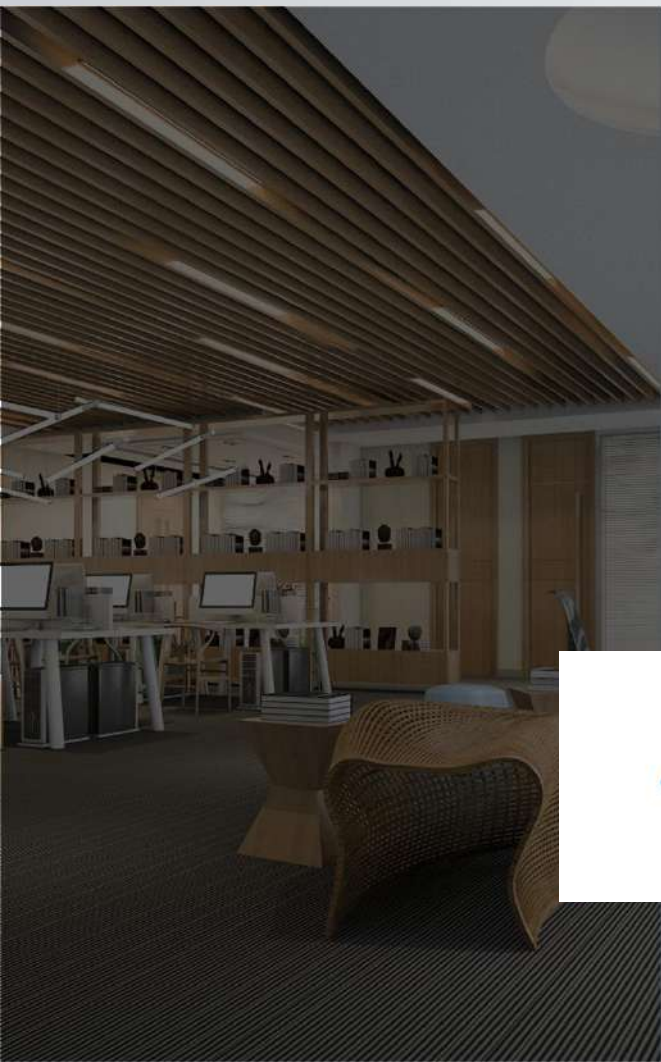

Fabrication

Software and  
API

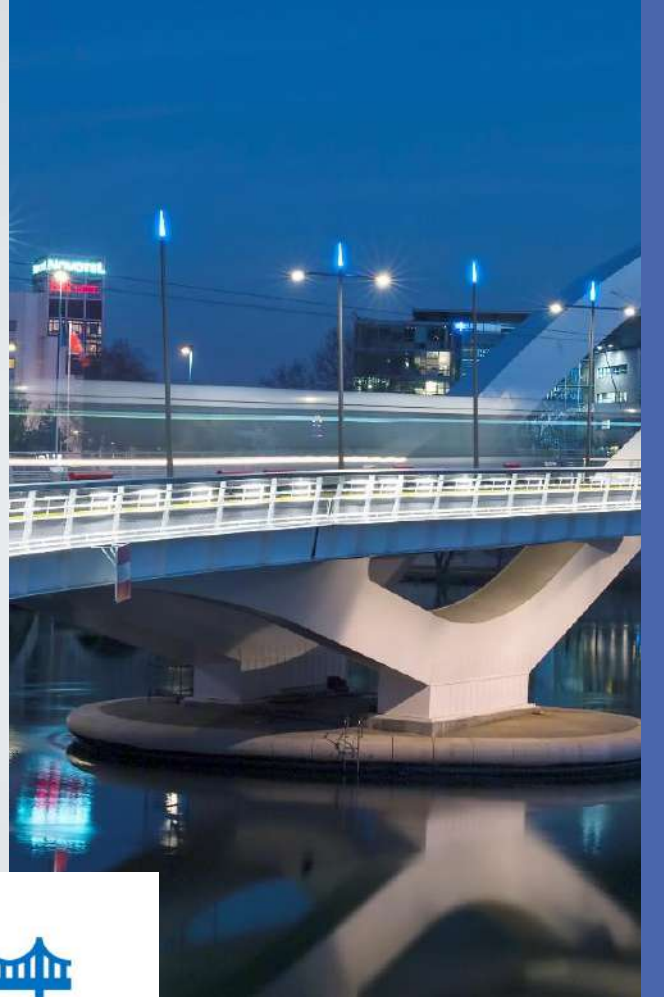

# BIM for Architecture

01. Concept modelling at LOD 200
02. Pre-contract documentation and LOD 300
03. Issued for Approval drawings and Modeling
04. LOD 400 modeling and drafting
05. Joinery modelling and drafting

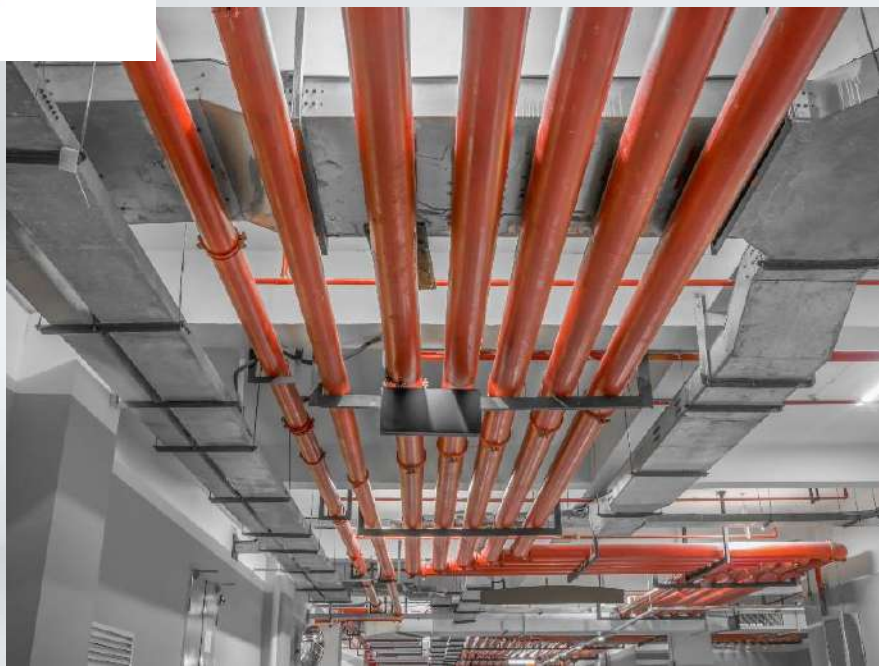

# BIM for Structure

We are experienced in working with American, European, British and Australian standards upto LOD 400

01. **Timber Construction**
02. **Cast-in-situ Structure modeling**
03. **Pre-Cast Construction**
04. **Conventional Steel Structure**
05. **PEB structure**

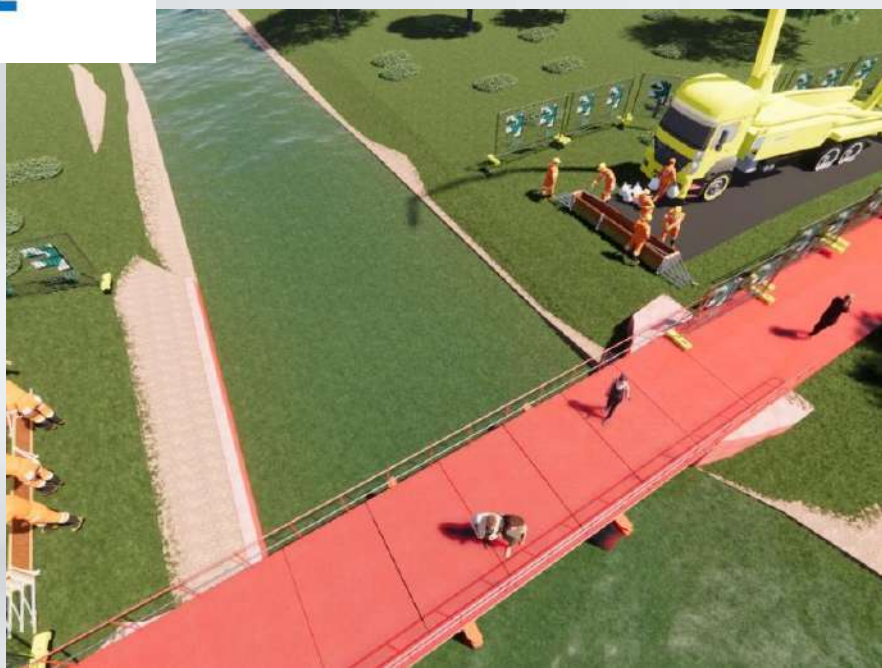

# BIM for MEPF

We are experienced in working with American, European, British and Australian standards upto LOD 400

01. **MEP 3D Information-rich model**
02. **Schematic Drawings for MEP**
03. **Estimated project cost with broad break up for Equipment's**
04. **Flow Diagram and layouts**
05. **Distribution Schemes for MEP services**

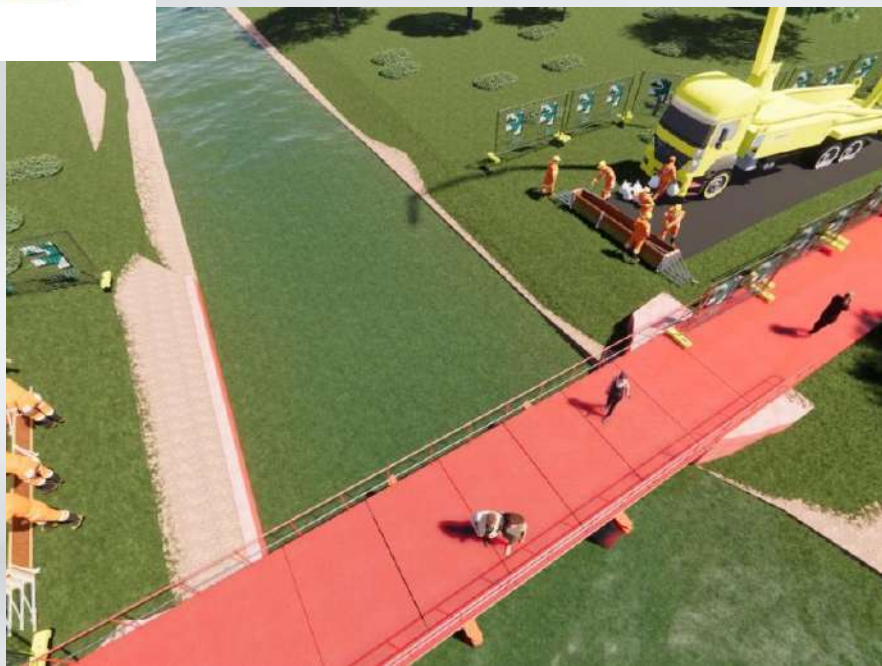

# BIM for Constrcution Management

- 01. **Construction Scheduling**
- 02. **Manage Tasks and Resources**
- 03. **4D Simulations**
- 04. **Facility Management**
- 05. **BIM Aditing**

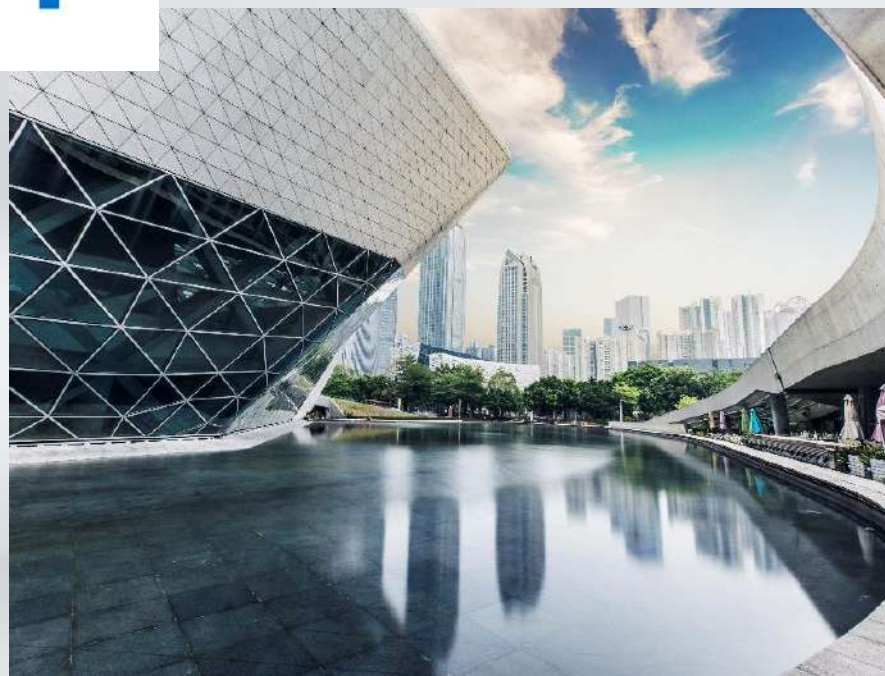

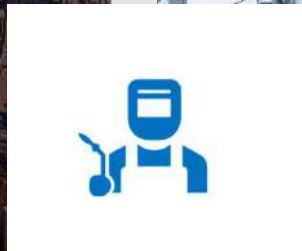

# Scan to BIM

01. Accurate modelling to the detail requirement LOD 300 and higher
02. Covering all the disciplines of Architecture, Structure and MEPF
03. Attributing the Information to 3D models
04. Generating quantities and schedules
05. Preparing the layout and detailed drawings as per the Scans

# BIM for Fabrication

- 01. HVAC ducts and Plumbing systems
- 02. Aluminum Curtain wall and façade system
- 03. Joinery and Furniture shop drawings
- 04. Metal façade and Cladding work
- 05. Stone assembly work

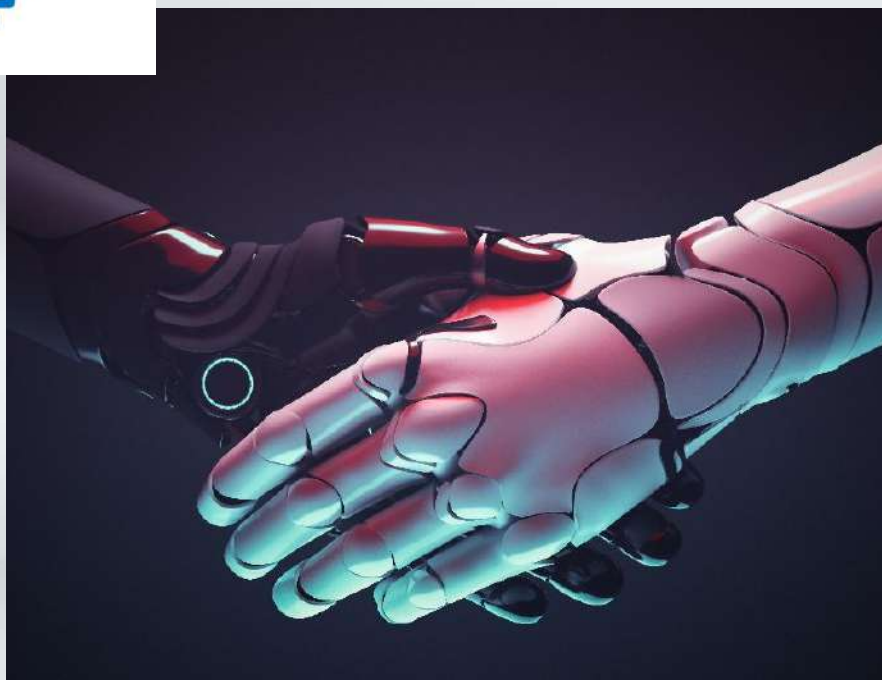

# BIM for Visualization

- 01. Interior and Exterior Rendering
- 02. Walk-through Videos
- 03. Animations and Simulations
- 04. Virtual Reality
- 05. Augmented Reality

# API and Automation for BIM

01. CAD and BIM Workflow automation
02. CAD and BIM plugin Development
03. BIM Interoperability
04. Computational Designing
05. Product development

# Communication

EshiaBIM establishing a proper communication channel with all clients and partners for faster sharing of the files and project-based discussion resulting in smoother and functional workflow

# Commercial Building

📍 Germany

## Brief

The project building is a large commercial space with multiple corporate offices, one hospital, restaurants and commercial stores. The property was for around 13,000 sq mts.

## Scope of Work

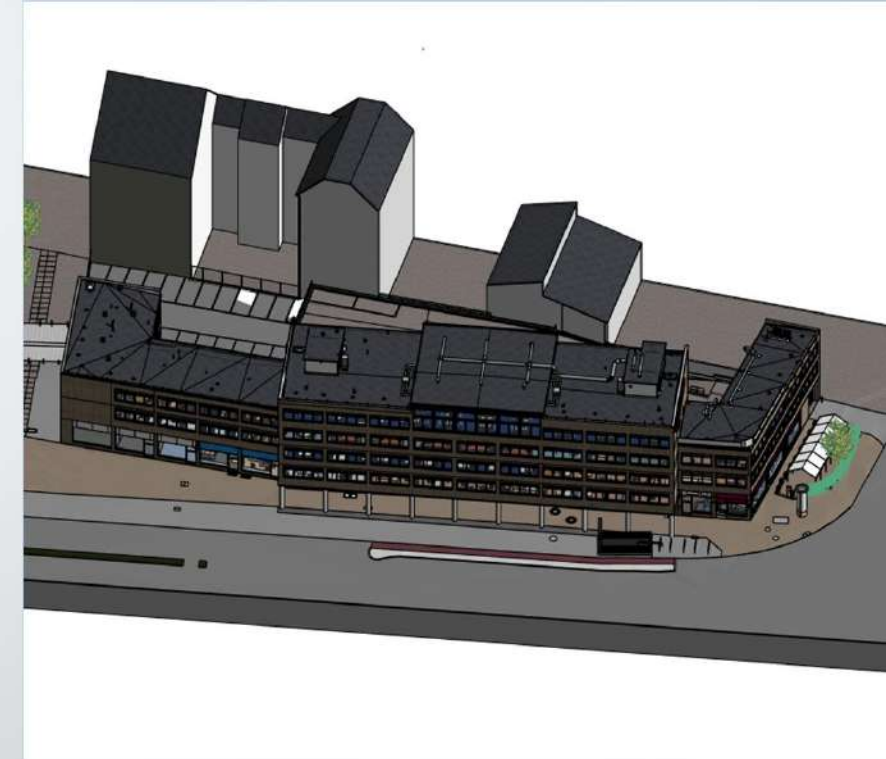

- ✦ The scope was to develop the LOD400 model using Point Cloud data.
- ✦ The scope included all the Architecture, Structure and MEP services
- ✦ Getting the room areas and plans
- ✦ Generating floor plans, Elevation and Section drawings.

## Challenges

- ✦ The Point cloud file was over 300GB in size and difficult to manage.
- ✦ Developing MEP systems to LOD 400 from point cloud data
- ✦ Short expected TAT.

**Software** Revit 2020, Recap and Naviswork

**Resources** 8 resources deployed for 60 days

## Solution:

- ❑ The point cloud data was split and managed to better performance on the desktops
- ❑ Weekly milestones and daily targets were set for keeping up with project deadline
- ❑ 3 to 4 level of QC was done for every task to ensure high quality of work

# Commercial Building

📍 Canada

## Brief

The project building is a large commercial space with multiple corporate offices and commercial stores. The property was for around 16,580 sq mts.

## Scope of Work

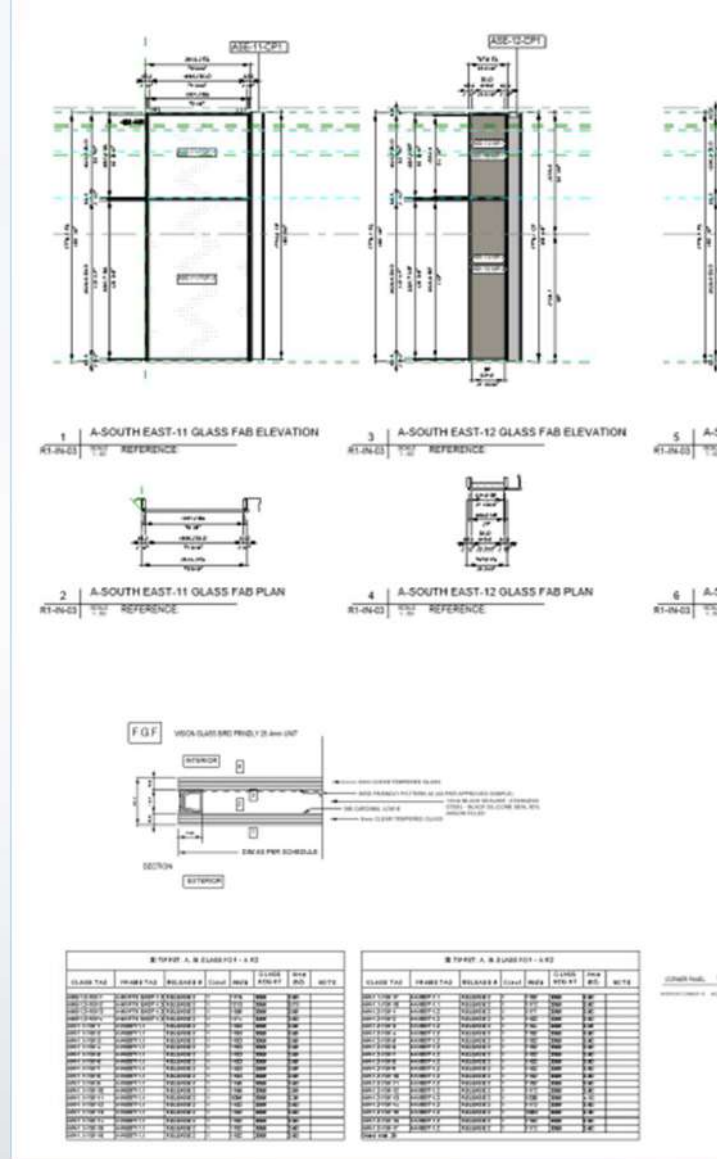

- The scope was to develop the LOD400 model for the exterior façade.
- The scope included developing shop and fabrication drawings of the Aluminium glazing system.
- Preparing the material take-off and cut lengths schedules

## Challenges

- Modelling over 200+ window and door panels.
- Modelling the metal cladding work and preparing the fabrication and installation drawings for the same
- Preparing the .stln files for the factory

**Software** Revit 2020, Naviswork, Inventor 2020

**Resources** 3 resources deployed for 4 weeks

## Solution:

- ❑ Setup the project templates and drawings standards before producing the drawings
- ❑ Organized and planned approach to model and draw workflow tasks for better productivity.
- ❑ Through checks to avoid regression of drawings.

# Mall + Theater

📍 America

## Brief

The project building is owned by one of the largest restaurant and café franchises in the world and this property included a large mall and theatre

## Scope of Work

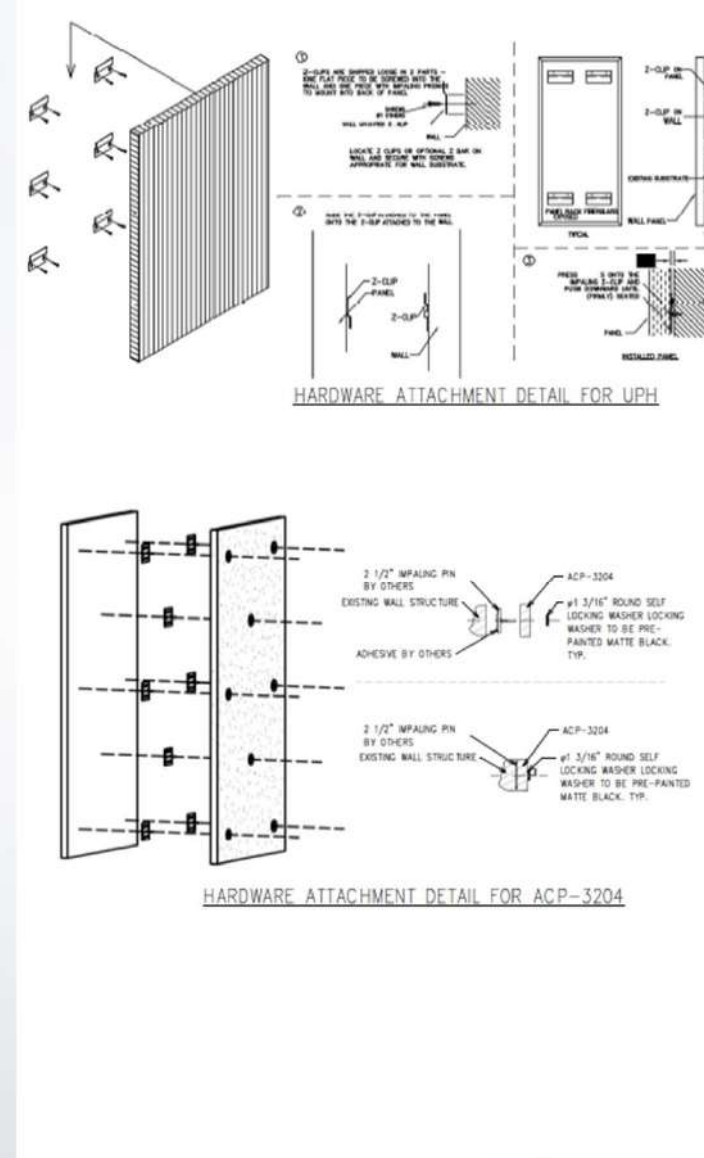

- Preparing the Architecture model upto LOD 300 for the property.
- Preparing the Acoustic planes for soundproofing the theatre
- Producing the shop drawings for the production of drawings Acoustic panels in the factory

## Challenges

- Short TAT for Architecture model of the property.
- Producing drawings for 350 panels within 2-3 weeks
- Over 20+ material variations with different installation procedures, all to be planned accordingly.

**Software** Revit 2020, Naviswork

**Resources** 2 resources deployed for 3 weeks

## Solution:

- ❑ Setup the project templates and drawings standards before producing the drawings
- ❑ Organized and planned approach to model and draw workflow tasks for better productivity.
- ❑ Through checks to avoid regression of drawings.

# Luxury Hotel

📍 London - UK

## Brief

The project is a 50 years old building with eight-story including a large basement and luxurious hallway, restaurant, concierge, bar and conference. The property is around 4951 sq. mt gross area.

## Scope of Work

- ✦ The scope was to develop the Architecture model of LOD300+
- ✦ Exterior façade to match point cloud data and Gmaps.
- ✦ The scope included developing shop drawings including floor plans, sections, and elevations.

## Challenges

- ✦ Short expected TAT for architecture model of the properties.
- ✦ Developing the details for the external façade
- ✦ Complex point cloud data with lot of noise

**Software** Revit 2020, Re Cap,

**Resources** 8 resources were deployed for 15 days.

## Solution:

- ❑ The tasks were planned and broken down into 3-day milestones.
- ❑ Through quality check for each task to ensure quality output and reduce rework.
- ❑ Site images to review and compare the locations with lot of noise in point cloud data.

# Central Library

UK

## Brief

The project is 4 storey Library building in one of the most reputed universities in the world and located in the UK. The project was going under renovation and the area of the of 3460 sq mts

## Scope of Work

- ✦ Developing LOD 300 Architecture and Exposed MEP model.
- ✦ Generating civil drawings for the existing structure which included, Plans, Elevations and Sections
- ✦ Extracting the material quantity and room schedules from the generated model.

## Challenges

- ✦ Many locations on the project site lacked clarity in the point cloud data.
- ✦ Modeling of 300+ furniture's in less than 10 days period
- ✦ Complex site topography and high level of detailing

**Software** Revit 2020, AutoCAD

**Resources** 4 resources deployed for 15 days.

## Solution:

- ❑ The tasks were planned and broken down into 3-day milestones.
- ❑ Through quality check for each task to ensure quality output and reduce rework.
- ❑ Site images to review and compare the locations with a lot of noise in point cloud data.

# Villa Project

📍 **Netherland**

## Brief

The project was private property owned by one of the wealthy families in the Netherland. A Luxury villa with all the luxury amenities and facilities in it. Area around 3000 sq mts

## Scope of Work

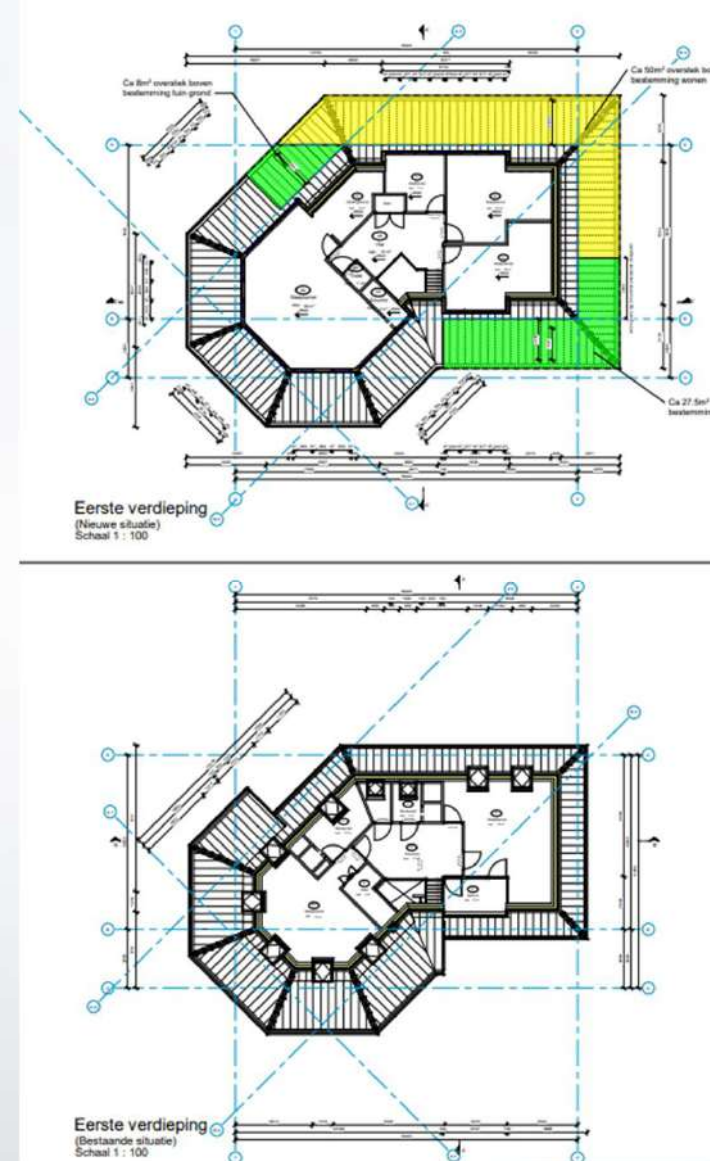

- ✦ Preparing the Architecture model upto LOD 300 for the existing situation property.
- ✦ Preparing demolition and New Construction drawings.
- ✦ Producing the shop drawings for the production of drawings Acoustic panels in the factory

## Challenges

- ✦ Preparing the existing building using the plans that are dated older than 1980s.
- ✦ Preparing the New situation model by coordinating with Architects.
- ✦ Creating the drawings and details up to LOD 400.

**Software** Revit 2020, Naviswork

**Resources** 3 resources deployed for 4 weeks

## Solution:

- ❑ Setup the project templates and drawings standards before producing the drawings
- ❑ Organized and planned approach to model and draw workflow tasks for better productivity.
- ❑ Through checks to avoid regression of drawings.

# Institutional Building

📍 Germany

## Brief

The project building is an institutional building with four stories above ground level with dual underground basement. The property was for around 12,715.29 sq mts.

## Scope of Work

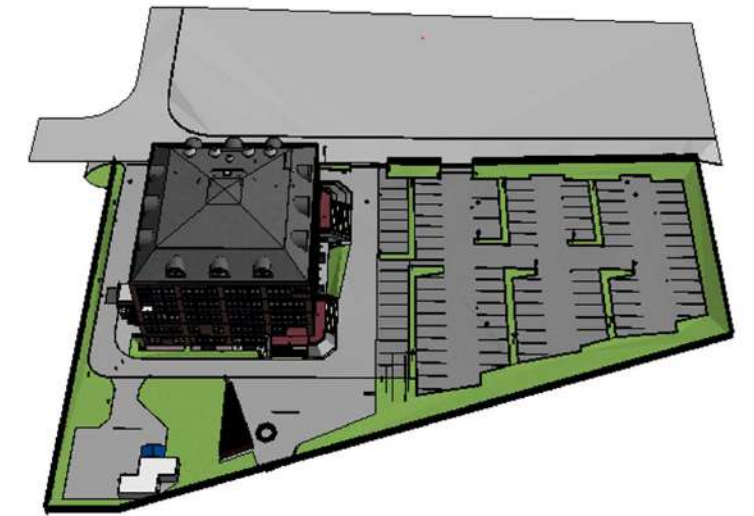

- ✦ The scope was to develop the LOD400 model for finish area calculation.
- ✦ The scope included all the Architecture, Structure and MEP services.
- ✦ Extracting the room area schedules
- ✦ Generating floor plans, elevation and section drawings and schedules.

## Challenges

- ✦ The point cloud scan available for site was limited.
- ✦ The Revit file was over 450GB in size and was difficult to manage.
- ✦ Specific Dormer creation inside the roof area.

**Software** Revit 2020, , Autodesk Recap

**Resources** 8 resource deployed for 60 days

## Solution:

- ❑ Modelling for site topography was completed using google maps.
- ❑ The main model file was divided in 3 parts to ensure proper workflow and to reduce load on resources individually.

# Hotel

📍 Germany

## Brief

The project building is an hotel building with four stories above ground level.

The property was for around 2,214.81 sq. mts.

## Scope of Work

- ✦ The scope was to develop the BIM modelling for surface area calculation.
- ✦ The scope included all the Architecture, Structure services.
- ✦ Getting the room areas and plans.
- ✦ Providing floor plans, elevation and section drawings.

## Challenges

- ✦ Complex staircase creation for rear building area.
- ✦ Specific dormer creation inside the roof area.

**Software** Revit 2020, Autodesk Recap

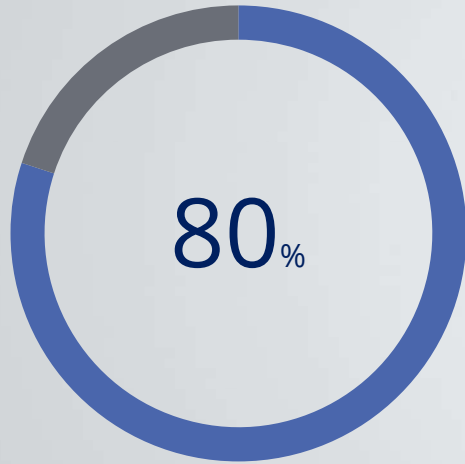

**Resources** 3 resource deployed for 30 days

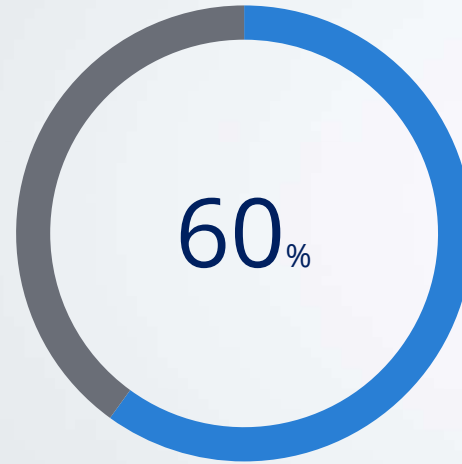

## Solution:

- ❑ Modelling for site topography was completed using Google maps.
- ❑ The main model file was divided in 3 parts to ensure proper workflow and to reduce load on resources individually.
- ❑ Dormer window family developed by in-house team.

# Why choose **EshiaBIM?**

More than 80% of client retention

60% of clients based in Europe & UK

Property work in year 2021-22

High Quality work in short TAT

Qualified and Competent team

Economical pricing for the services

**Thank You  
For  
Your Attention**
